## Safer engineering with mpro5

*At first glance you might not think there's much we can offer to a company that specializes in asbestos removal. However, any business that has out of office teams can benefit from mpro5 and we've helped civil engineers, Erith, to save money, improve their working practices and build better relationships with their clients. All through one simple mobile business app.*

### Constantly searching for innovation

Erith is one of the largest civil engineering and demolition companies in the UK, working on prestigious projects such as the Olympic park in London. With more than 50 years experience and turn over of more than £65 million, their business was thriving. However, technology is constantly changing Erith is constantly seeking innovative ways to improve.

One of Erith's areas of expertise is asbestos removal. It's a business that requires specialist engineers and generates a great deal of paperwork and reporting. When Erith came to mpro5, all this documentation was managed manually, with endless paper trails, data reentry and filing.

Erith already had an effective system in place to manage their scheduling and work flows. However, the system didn't give engineers the power to carry digital forms and documents, so they went to every job armed with a file of forms, which then needed to be completed manually, returned to the head office and reentered into the database. Engineers didn't like the paperwork and customers didn't like the delays and errors that came with it.

# CASE STUDY

## Erith Group

### Simple and smart integration

The beauty of mpro5 is that it can easily be integrated with current systems and, because it operates through a secure cloud-based website, there is no need for additional infrastructure or software. We integrated the mpro5-website with Erith's current database, so all jobs and scheduling could continue to be managed as usual.

The additional benefit of mpro5 was that a series of mobile forms could be added to each job and made available for engineers to access onsite via their ipad. Everything from the engineer's certificates of qualification to job specifications and completion reports could be accessed, completed and filled out at the touch of a button.

### Happier staff and customers

Improvements have been felt across the board. Engineers are confident they have the right forms at their fingertips and can complete everything immediately without time-consuming journeys back to the office. mpro5 can even offer GPS tracking on forms that are filed, so staff and clients have the added peace of mind that the right job has been completed at the right location.

In short, mpro5 has removed the additional costs, errors and delays that come with manual paperwork. With less wastage and fewer car journeys, the company has improved their green credentials whilst also working in a much for efficient and productive way.

All these benefits are felt by their customers who have greater confidence in the company to carry out their work to the high standard they are renowned for.
